---

for 2955DW ML-2955DW is a IP-based, high-performance multi-channel direct to home network video system. The system consists of a TV receiver, a home network, and AV components (DVD players, VCRs, etc.). A TV receiver is connected to the home network via a network cable and through the use of the TV receiver's power control. The TV receiver controls the power on and off for the components of the home network, and the power on and off for individual components. ML-2955DW Home Network Communication, Installation and Operation A user opens a home network and selects a home network password. The user can also select an authentication method. When the user selects the appropriate authentication method, a passkey is displayed on the TV receiver. The user inputs this passkey into the

---

TV receiver. A home network is formed by connecting the TV receiver to all the devices of the home network via the network cable. The user inputs the selected home network password to the TV receiver. To make the TV receiver access the home network from outside the home, the user inputs the home network password to the TV receiver and then turns on the home network switch. The user turns on the TV receiver. ML-2955DW Home Network Communication, Installation and Operation When a user wants to access the home network from outside the home, the user opens the home network on the TV receiver, selects the home network password, inputs the home network password into the TV receiver, turns on the home network switch, and turns on the TV receiver. A home network is established between the TV

---

receiver and all the devices of the home network. The user inputs the home network password to the TV receiver. To access the home network from outside the home, the user inputs the home network password into the TV receiver. Once the TV receiver accesses the home network, the user can use the TV receiver to control all the home network devices on
